Photoshop Elements If you're just starting to experiment with a bit of image editing, the Photoshop Elements software from Adobe is a perfect place to start. The program is designed to provide a simplified image editing experience to beginners or those who may not use Photoshop. The program is completely free with no additional features and no user license; just download and run the program. The program contains all the basic editing tools found in Photoshop, such as the basic painting, drawing, and photo retouching tools, as well as a few new tools. You can save files in standard BMP, JPEG, and GIF file formats. The _E_ (for _Elements_) designation means that Photoshop Elements is an entirely stand-alone image-editing program, and that it works best without the Photoshop name attached. # GETTING MORE OUT OF THE PHOTOSHOP LABELS The image editing tools in Photoshop are a lot like the ones in the Labels palette, making it natural to apply one tool to several images, or to create the same label in several different ways on one image. For instance, a common way to create a single-color label is to import an image, apply a black or gray background to the image, create a label for the background, and then print the image and label in one pass. It's also possible to create multiple labels in Photoshop with the Labels panel, either by selecting a set of labeled images and letting Photoshop create labels for them automatically, or by selecting individual images and then grouping them into a set of related images that can be printed together as a group. These methods are usually more efficient than manually creating a label. ## Considering Your Print Formats and Paper Sizes You can create different layouts from the same file, including letter and legal-sized printouts and even larger maps and documents. And you'll find many print options and photo paper sizes available from the Tool Options bar. The following figures show what you can expect to find in the Tool Options bar: In Figure 1-8 you see the Tool Options bar with the Print Size menu at the top. You can select from three different paper sizes — U.

While most people do their editing in Photoshop or Photoshop Elements, many make use of third-party applications to get the job done. Below is a list of tools for use in Photoshop that provide a wide range of functions for editing, creation, and artistic use. We will be updating the list as we discover new, useful ones. Adobe Photoshop is a graphics editing software application developed by Adobe Systems. After starting as a graphic design application that specifically targeted photo retouching, Photoshop quickly expanded into other areas of graphic design, including photography and video editing. It contains features designed to make it easy for inexperienced users to perform retouching and editing tasks. A high proportion of the features are automated; this and the application's simple interface make for a user experience that is very efficient for tasks such as retouching and compositing. Most people use it for photography retouching and basic post-processing, including adding and removing backgrounds, changing contrast, cropping, creating a black-and-white image, converting colour images to black-and-white, and changing the camera's white balance. It can also be used for photo manipulation and layering, including the removal of backgrounds and text and replacement of objects and background elements. Photoshop supports many professional-grade color, exposure, and contrast corrections, but also offers controls for many other manipulations. It also contains tools for creating and editing textures and lighting effects, as well as a wide range of masks and filters. Adobe Photoshop is available for Windows (as Photoshop CS 2 or higher) or Macintosh systems, as well as a web-based version of the application that is designed specifically to run within a web browser. There is also a limited free version that is available for download on macOS, as well as a free edition for iPad users. Adobe Photoshop Elements is a graphic design software application by Adobe Systems that contains core functions of Adobe Photoshop, and which is targeted at amateur designers and enthusiasts. It was released for Mac and Windows systems as a free download and has been available through the Mac App Store since 2010. The program contains a design package which includes features such as selection tools and a collection of textures, but lacks the various tools present in Photoshop, such as layers. Photoshop Elements is included as a part of the Adobe Creative Cloud for subscription-based users, and also as a package within the Creative Cloud Photography package. Homeowners want to protect themselves against any cost increases caused by the fact that the city and the county will close the westbound lanes of the San Mateo Bridge for three years starting in August 2016. The San Mateo County Board of Supervisors and the San Francisco Public Works Commission agreed to the closure to replace the eastbound span of the bridge. City voters approved the \$4.4 billion bridge replacement project in a 2004 ballot measure, but the northbound span was built 40 years earlier than the southbound span, and has many design flaws. The city and county made a deal to close the westbound lanes for three years in exchange for the remaining cost of closing and rebuilding the upper deck. The project also requires the creation of two new bridges with no southbound traffic to allow workers to stand on the lower level to work on the new span. The vote will raise \$900 million in bridge tolls, the county will retain ownership of the new span, and the city will maintain ownership of the current span. County Supervisor Chris Daly said the agreement will be reviewed in a public hearing by the San Mateo County Board of Supervisors on Aug. 4. "San Mateo County has a long and storied history with the San Mateo Bridge," said Daly. "I understand that people are concerned about the impact on traffic, but it is our hope that by closing the westbound lanes in what is a down period for traffic that we can provide options for alternative modes of transportation." The decision does not apply to students and commuters who use the bridge regularly. Bob Egelko is a San Francisco Chronicle staff writer. Objective ===== The present study aimed to compare the risk factors associated with severe neonatal outcomes between infants born in facilities and infants born at home. Methods ===== A case-control study was performed between January 2014 and June 2015 to identify neonatal risk factors associated with severe outcomes (death, neonatal sepsis, septic shock and proven early onset sepsis) in live born infants from the general population. Controls were matched to the cases in strata of each associated risk factor. Results ===== A total of 5,824 live births were evaluated and were stratified by place of birth (facility vs. home). Severe outcomes were more frequent among infants born at home (73.7%) compared to infants born in facilities (67.6%, OR 1.6: 1.3-2.0). In this situation, multivariate analysis showed that birth at home was independently associated with severe outcomes (OR 1.4:1.1-1.9). Conclusion ===== When compared to birth in the facilities, home delivery is an independent risk factor for severe neonatal outcomes. The present study highlights the need for home delivery to be discouraged and therefore given priority in Brazil and globally. Fall River Backlog (5B) Backlogs (sometimes incorrectly referred to as slumps) are the means by which the levee board keeps track of the estimated number of months that it will take for anticipated levee rehabilitation projects to be completed. When the anticipated project length is shorter than the estimated number of months, then a backlog is added to the project and the anticipated completion date is modified. Preparation of the Backlog In January 2010, the City of Fall River approved a Watershed Study to update its basin management plan, and to better prioritize the needs of future projects. In June 2010, the study identified this as a high priority project. At the same time, the Legislature directed the city to prioritize any levee project that would result in flood protection for over 3,000 acres, and to take action on the study within 5 years. In order to calculate the anticipated completion date for the project, the University of Massachusetts Boston Levee Research Program contacted surveyors and engineers in the Boston area, and used their data to project the number of months needed for the project. In August 2010, the City submitted the required 4-year budget request to
