## What's New in the?

The Symantec Security Check tool scans for and removes infected and vulnerable versions of the Active X Control vulnerabilities described in the following categories:

- **ActiveX Control Errors:** This category includes vulnerabilities that may allow a user to launch unauthorized actions on a system. The Active X Control can be used in Internet Explorer, as well as in other browsers and in systems that include Internet Explorer. You can find more information about Active X controls by using the following topics:
- **Web Browser Application Vulnerabilities:** When you run an application that is using Active X Controls, you are enabling security for your computer. An Active X Control can give your computer viruses or other types of malware. You can learn more about how to protect your computer by using the following topics:
- **Internet Explorer Vulnerabilities:** This category includes vulnerabilities that may allow a user to launch unauthorized actions on a system. For example, when you download or install an Active X Control, it may provide access to your computer for viruses. You can find more information about Internet Explorer by using the following topics:
- **Other Applications:** This category includes vulnerabilities that may allow a user to launch unauthorized actions on a system. For example, when you download or install an Active X Control, it may provide access to your computer for viruses. You can find more information about applications that use Active X Controls by using the following topics:

**Symantec Security Check:** Running the tool The Symantec Security Check tool is part of the Symantec Support Tool, which is part of Symantec's Symantec Security Response Team (SST). The Symantec Support Tool scans for and removes infected and vulnerable versions of the Active X Control. The Symantec Support Tool ActiveX Control Cleanup Tool is a script, which checks to see if the Active X Control is still installed. This Active X Control is located in two different places:

- **On your hard disk:** Active X Controls can be located on the hard disk of your computer. When you install software, you may need to enable access to your computer for Active X Controls. By default, this access is turned off. To turn on access, use the following steps:

- Access the System menu and select Control Panel.
- Under System, click the Security tab.
- Click Custom Level, and then click the Edit button.
- In the Authentication section, select Enabled.
- In the Enable Features section, select Always accept the security certificate.
- Under Browser and Mail Security, select Never prompt me.

You can find more information about Windows security and Internet Explorer by using the following topics:

- **Windows Security and Internet Explorer:** Windows Security and Internet Explorer provide

## **System Requirements:**
