I've found out how to add a link, but how to I add a custom icon with toggle action? An example of what I have so far is: `$('.main-menu li').each(function() { $(this).append(""); });` I've looked into using a click toggle, but am not sure how to implement that, any help would be appreciated. Thanks. A: Use the `:before` pseudo selector: `.main-menu li:before { content: "some content"; }` Demo: Learn more about CSS selectors and pseudo elements here: Q: Is BigInteger easy to multiply from the right? I have this algorithm that loops through an array of ints: `public static void addIntMulti(int[] target, int[] source, int len) { for (int i = 0; i < len; i++) { target[i] += source[i]; } }` I'm trying to make it better by switching from an int array to a BigInteger array.
